How Alaska Will Be Affected if Stafford Loan Interest Rates Double

June 2013

More than 7 million students and their families rely on federally subsidized Stafford loans to help pay for college. These loans are distributed by the U.S. Department of Education and currently hold an interest rate of 3.4 percent, but that rate will double if Congress fails to act by July 1, 2013. If that occurs, millions of students will see interest rates soar to 6.8 percent on the new loans they take out in the next year, causing a steep rise in their loan burden and effectively increasing the cost of obtaining a college degree.

Student debt has a rippling negative effect on the broader economy

Below is an excerpt from a recent column, “Student-Loan Debt Has a Rippling Negative Effect on the Broader Economy,” by Joe Valenti, Director of Asset Building at the Center for American Progress; Sarah Edelman, Policy Analyst at the Center for American Progress; and Tobin Van Osten, Deputy Director of Campus Progress. The authors explain how the student-debt crisis is impacting other areas of the economy, including the housing market and retirement security. They argue that certain solutions, including a refinancing program and expansion of income-based repayment options, would better equip borrowers to manage their student debt and invest in their future financial stability.

Not surprisingly, declining incomes, rising housing costs, and higher student debt are all having a ripple effect across the broader economy. First, these factors may be delaying household formation. Two million more adults ages 18 to 34 live in a household headed by their parents than before the recession, an increase from 28.2 percent in 2007 to 31 percent in 2011. Moody’s Analytics estimates that each new household leads to \$145,000 of economic activity, suggesting that this delay in household formation could be slowing broader economic growth.

***Correction, June 24, 2013:** These fact sheets incorrectly labeled data as “average debt upon college graduation” and have been updated to “average debt per borrower.” Additionally, the fact sheets now note that the college completion rate is for four-year public colleges.

Voting record

THEN

On June 29, 2012, the Senate passed a bill with bipartisan support to keep interest rates on subsidized Stafford loans from doubling.

Lisa Murkowski
(R)
YES

Mark Begich
(D)
YES

Moreover, the delay in household formation and the financial challenges for adults in their twenties and thirties may alter the future of the U.S. housing market. The Bipartisan Policy Center estimates that Echo Boomers—those born between 1981 and 1995—will drive 75 percent to 80 percent of owner-occupied home acquisition before 2020, when Baby Boomers begin to sell off their homes. Yet homeownership rates for young people are among the lowest in decades.

While home prices and mortgage interest rates are both at historically low levels, the tightening of credit resulting from the housing crisis poses a double obstacle to young people with significant debt. First, due to the implementation of new mortgage regulations under the Dodd-Frank Act, lenders are often requiring that homeowners have a 43 percent “back end” debt-to-income ratio to get a loan. In other words, combined monthly housing costs and monthly debt payments must not exceed 43 percent of one’s monthly income in order to qualify for a loan. For those with significant student debt, this debt-to-income ratio cap may well put homeownership out of reach.

Second, even young borrowers who successfully meet debt-to-income ratios may not be able to set aside enough savings for a down payment. The Center for Responsible Lending calculates that median-income families of all ages take nearly 20 years to save enough for a 10 percent down payment and the closing costs for a moderately priced home. Younger workers may take even longer to save for a down payment, given their other immediate financial obligations, or they may simply never reach this goal.

How doubling Stafford interest rates will affect families in Alaska

Allowing the interest rate on Stafford loans to double will significantly burden those already struggling with education costs and high unemployment.

Youth unemployment rate	13.5%
High school completion rate	68%
* College completion rate (four-year public colleges)	26.6%
Change in higher education spending	-3.2%
College graduates with debt	N/A
* Average debt per borrower	\$24,760
Borrowers more than 90 days delinquent	10.1%
Consumers with education debt	14.9%
Number of Stafford Loan borrowers	11,624
Average savings if rate unchanged (per borrower)	\$905
Total savings if rate unchanged (statewide)	\$10,519,720

Recent in-state press coverage

“Congress now sets the rate, but a plan from House Republicans would base it on market rates instead. If it becomes law, subsidized loans – those that don’t accumulate interest while a student is in school – would have a higher interest rate next year.”

— “House Republicans, White House look to change student loan rates,” *Anchorage Daily News*, 5/14/13

“Doubling the student loan rate to 6.8 percent rate in July is unfair and needs to be curtailed. Students, unfortunately, do not have the benefit of high priced lobbyists such as those representing the banking system.”

— “Letter: UAA should stand up for its students on loan rates issue,” *Anchorage Daily News*, 5/13/13
